Solution delivered...

eAsE

eAsE is middleware designed to ensure employers comply with their duties. This web-based software gives users complete control of the implementation and ongoing management of auto enrolment including the initial employee assessment, managing of employee opt ins and opt outs, issuing of statutory employee communications and record keeping to ensure compliance with The Pensions Regulator's requirements.

Proposition overview

▶ **Manages the entire auto enrolment process through one intuitive system**

▶ **Manages workforce assessments, opt in and outs, employee and employer contributions and regulatory communications**

▶ **Can be implemented quickly either to integrate with other HR, payroll and pensions systems**

▶ **Makes member documentation more visible (members and administrators can have full view access)**

▶ **Runs data validation reports to meet The Pensions Regulator's record keeping requirements**

The quality of member data has proved to be a crucial component of any auto enrolment exercise. Incorrect, duplicated or inconsistent data can lead to the issuing of inappropriate member communications, mismanagement of contributions and delays in the process which ultimately could lead to the attention of The Pensions Regulator – not to mention the reputational consequences for advisers advising employers.

As a consumer friendly system, *eAsE* can be used directly by the employer or HR representative, as well as advisers looking to manage and replicate bulk enrolment processes. *eAsE* also integrates seamlessly with other HR and payroll software without the requirement for additional installs or customisation.

eSuite compatible systems

As part of the ITM *eSuite*, *eAsE* works in harmony with other systems including:

PenScope

Pensions and payroll administration

eMember

Member access to pension account details and downloads

ePortal

Employer and administrator portal
